Sense a Trickle of Flow

The [FD-2000 single piece flow / no flow sensor](#) is a highly sensitive device that detects even the tiniest trickle of flow of powders or solids. Use it to prevent cross contamination or as a preventive control to comply with FSMA. Features North American Class II, Division 1 Groups E, F, & G and ATEX Zone 21 hazardous

Silo Levels in 3D

[BinMaster's 3D Scanner](#) is the ONLY level sensor to measure and map multiple points and make a 3D visual of the topography of the resin in the silo. Accounts for surface variations in powders or solids for accurate inventory VOLUME of 1% to 3% of total stored volume. [MultiVison software](#) monitors all silos with automated alerts. Minimal maintenance and works in dust!

Level Data on Your Phone, Tablet, or PC

[BinView](#) puts level data at your fingertips wherever you have internet access. Get level data on your bins, tanks, or silos anywhere, anytime. It's compatible with many of [BinMaster's sensors](#) used for measuring solids or liquids. Get real-time inventory management and automated alerts to your phone, tablet or PC. BinView

location approvals for dusty environments.
